1. Login Greeting and Error Handling (`login.js`)

Description:
 This script handles user login interactions. When a correct username/password is entered, the script displays a hidden message saying **"Hello [username]"** without reloading the page. If the login fails, it shows an error message in red text and clears both the username and password input fields.
 Key DOM Actions:

- Updates text inside `<div>` (`innerText`)

- Shows/hides elements using `style.display`

- Clears input fields by setting `.value = ""`
